RELEASE / 27 OCTOBER 2026

VerityNgn OSS 3.0.0

From video claims to reviewable evidence.

An Apache-2.0 multimodal claim-risk engine.
Built for research, legal review, and better questions.

OPEN SOURCE | MULTIMODAL | HUMAN REVIEW

github.com/hotchilianalytics/verityngn-oss | v3.0.0 tag updated 27 Oct 2026

One video. Many claims. A reviewable record.

Analyze the spoken words, visible content, and supporting evidence—not just a transcript.

01 / INPUT

YouTube or local video

Audio, frames, captions, and on-screen text.

02 / EXTRACT

Identify + classify claims

Separate facts, inference, opinion, and prediction.

03 / RESEARCH

Research + verify

Grounded verification and Deep Research.

04 / REVIEW

Inspect the findings

Standard report, deeper brief, and structured outputs.

Supported / Contested / Unresolved — assessments for human review.

Sources: tagged README; docs/OPEN_CORE.md. Not an admissibility, credibility, or compliance determination.

What 3.0.0 puts in the open core

Engine and research improvements belong in OSS first.

Flexible analysis

Light, full, auto, and local tiers; caption tools.

Deep Research

Deeper evidence work in the OSS engine.

Six claim kinds

Facts are not mixed indiscriminately with predictions.

Genre-aware review

CRAAP for consumer content; SIFT for analysts.

Visual risk cues

Adaptive vision, exhibit maps, and brand-safety flags.

Research sensors

Optional predictions / RiskFactor S00–S15 suite.

Source: docs/launch/RELEASE_NOTES_v3.0.0.md. Optional sensors are research tools—not lie or alpha detectors.

A forecast is not a false fact.

Six lanes make the assumptions behind an assessment easier to inspect.

LANE 1

Source-backed fact

Check against external records.

LANE 2

Data-derived inference

Inspect data and method.

LANE 3

Causal / analytical

Examine the causal reasoning.

LANE 4

Reasoned opinion

Distinguish judgment from evidence.

LANE 5

Prediction

Identify assumptions and horizon.

LANE 6

Unverified assertion

Keep the unresolved claim visible.

Only source-backed facts feed the core true/false histogram.

Source: verityngn/workflows/claim_kind.py. Descriptions are suggested reviewer questions, not legal tests.

OPEN-CORE MODEL

Open engine. Explicit product boundaries.

Do not confuse an engine capability with a finished legal application.

AVAILABLE OSS

Engine + research

Claim extraction and verification.

Deep Research and reports.

Optional vision / audio / sensors.

HOSTED / COMMERCIAL

VerityIndex

Hosted delivery and commercial packaging.

Broader control-plane features are phased targets.

COMPANION / PHASE 1

Disclosure review

rfkit is a separate companion path.

ClearFactor vault and counsel services are not core OSS.

Sources: docs/OPEN_CORE.md; docs/platform/COMMERCIAL_MAP.md; docs/platform/RFKIT_OSS_EXTRACT.md.

Deposition review: prepare stronger questions.

Use the engine to organize factual assertions and evidence—not to score a witness’s honesty.

START WITH

A cleared recording

Public deposition or approved local file.

Preserve the original media.

Use video mode for visual context

RESEARCH

Claims + support

Separate facts, expert inference, and predictions.

Inspect sources and evidence gaps.

COUNSEL REVIEWS

Questions + exhibits

Verify against the certified transcript and exhibits.

Draft follow-up questions.

Record counsel’s judgment.

Release battery: Butler Kahn deposition → 39 extracted claims; functional PASS.

Sources: legal_deposition domain pack; release test matrix. No legal-accuracy or witness-credibility validation claimed.

Start with the public-communications queue.

A practical first user: the lawyer who must ask, “What supports this statement?”

Marketing + product claims

Review recorded demos, webinars, and health or performance claims.

Question: what evidence supports the promise?

Executive communications

Separate historical assertions from forecasts in public interviews.

Question: what assumptions need counsel’s review?

Regulatory intelligence

Break a public hearing or policy explainer into typed claims.

Question: which statements need primary-source verification?

Outside-counsel handoff

Share a sourced research brief for an assigned legal issue.

Question: what remains unresolved and who owns it?

Suggested workflows derived from the released engine; not proven customer outcomes or automated legal conclusions.

Disclosure review: language versus the record.

Separate rfkit / ClearFactor path—not a turnkey feature of the core v3.0.0 install.

INPUTS

Item 1A + own record

Compare risk-factor wording with issuer filings and public incident records.

Private incident logs are paid-service scope.

DRAFT FINDING

A mismatch to examine

Identify candidate same-incident matches.

Ask whether hypothetical wording fits the known record.

COUNSEL DECIDES

Keep / revise / relocate

Draft actions: Rewrite, Keep, Move to General, or Remove.

Materiality and filing decisions stay with counsel.

Phase 1: separate companion checkout; disclosure extra is an empty marker today.

Sources: COMMERCIAL_MAP.md; RFKIT_OSS_EXTRACT.md; DOMAIN_PACKS.md. Verify separate companion availability.

Example: the pair a junior would catch

Microsoft, public EDGAR filings only. The companion found this pair, then set it aside.

10-K ITEM 1A · FILED 29 JUL 2026

“The threat actor used information it obtained to gain unauthorized access to some of our source code repositories and internal systems, and the threat actor could continue to utilize this and other information to attempt to gain access…”

8-K ITEM 1.05 · FILED 19 JAN 2024

“On January 12, 2024, Microsoft (the “Company” or “we”) detected that beginning in late November 2023, a nation-state associated threat actor had gained access to and exfiltrated information from a very small percentage of employee…”

ILLUSTRATIVE EDIT — FOR COUNSEL TO CHANGE, NOT TO FILE

State the disclosed event with its date. Keep any residual forward-looking risk in a separate sentence.

Junior gate: 3 pairs found, 0 kept. Item 1A already states the event; the edit is style—split past fact from forward risk.

Sources: MSFT 10-K filed 29 Jul 2026 (Item 1A); 8-K Item 1.05 filed 19 Jan 2024. Quotes shortened. Phase 1 companion run, not core v3.0.0.

Map the claims—not the speaker’s credibility.

Use public or expressly cleared material before introducing confidential recordings.

TRIAGE

Public allegations

Organize claims in scam videos, interviews, or public allegations. Treat allegations as allegations.

RESEARCH

Corroboration + gaps

Identify source-backed questions and contradictions to examine. Cross-record reconciliation stays with the reviewer.

PRESERVE

An investigation record

Preserve original media, source dates, run settings, and counsel’s notes. Follow your own evidence-handling process.

Suggested workflow. Not forensic authentication, certified chain of custody, a discovery platform, or a deception test.

Three entry points for the wider community

All use the same core idea: a claim and its evidence should be inspectable.

RESEARCHERS

Scam-video research

Investigate product promises and evidence gaps.

Use counter-evidence rather than popularity as proof.

BRANDS + AGENCIES

Sponsor readiness

Review visual risk flags and unsupported claims before a human placement decision.

ANALYSTS

CEO-video research

Explore optional delivery / instrument sensors.

Research measurements—not deception or return guarantees.

Sources: domain pack catalog; release notes; open-core boundary. Use cases are proposals, not customer traction.

ILLUSTRATIVE EXAMPLE / NOT A PRODUCT SCREENSHOT

A useful finding ends with a better question.

Hypothetical GC review of a recorded product webinar; no real company or measured result.

ILLUSTRATIVE CLAIM

“Our service has never experienced a material outage.”

FACT LANE / VERIFY SOURCES

REVIEWER QUESTIONS

1. What period does “never” cover?
2. What does “material” mean here?
3. Do approved incident records agree?
4. Should the wording be qualified?

Illustration of a proposed workflow. Private incident-log comparison is not claimed as an automatic core feature.

Proof of execution—not proof of legal accuracy.

The release documents a live Primary-10 test battery with one disclosed video substitution.

10

video fixtures

Primary-10 battery

263

extracted claims

Expansion rows 3–10 only

39

deposition claims

Butler Kahn fixture

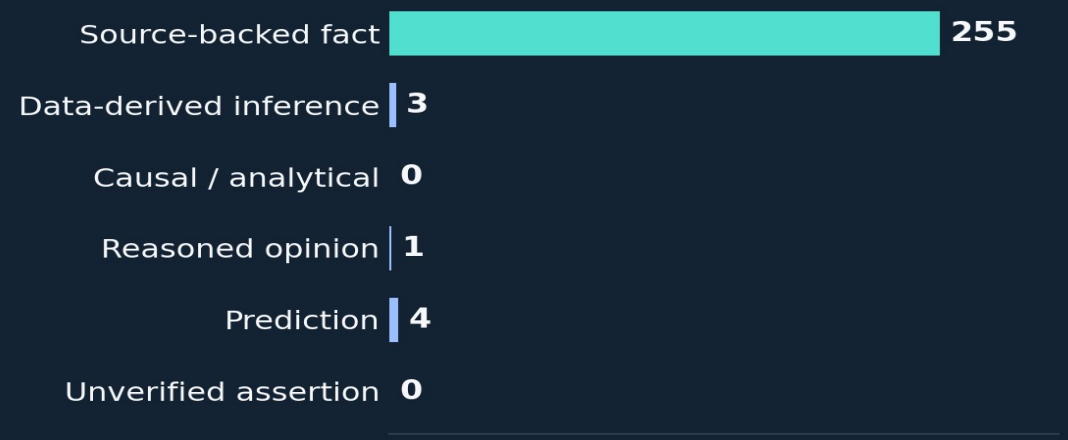

PASS means the documented functional gates passed—not validated correctness, ROI, or legal admissibility.

Sources: BATTERY_RESULTS_v3.md; RELEASE_TEST_MATRIX_v3.md. Project-reported, not an independent audit.

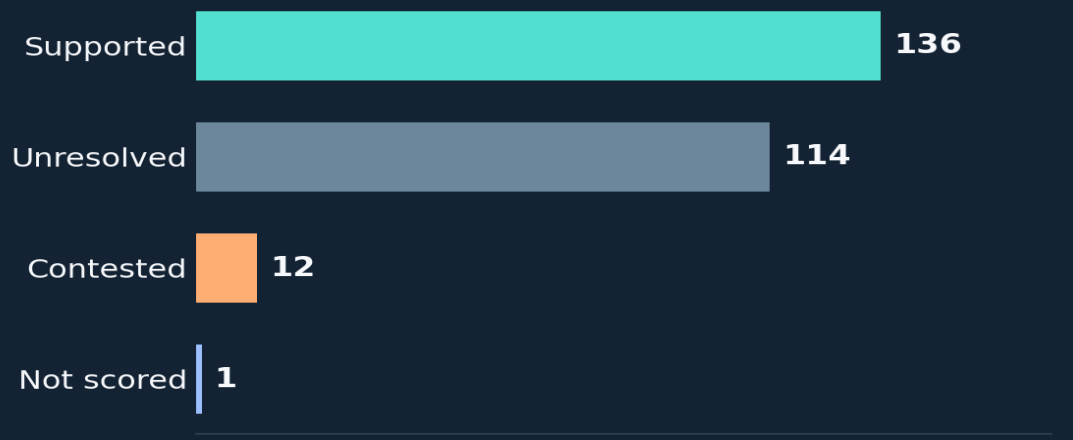

263 claims, sorted into lanes

Primary-10 rows 3–10: eight live videos. Counts come straight from the report JSON.

CLAIM KIND

ASSESSMENT LABEL

114 of 263 stayed Unresolved instead of being forced to true or false.

Source: BATTERY_RESULTS_v3.md; per-row *_report.json in the local battery run. Project-reported; labels are research aids, not ground truth.

A forecast stays a forecast.

Expert economic testimony from the Butler Kahn deposition fixture. Real extracted claims; no witness is scored.

PREDICTION · 20:34

$4.10M life-care cost

Present value under an 18-year life-expectancy scenario ending 2040.

Unresolved · residual reliance: medium

PREDICTION · 19:46

$3.58M life-care cost

Present value under a 15-year life-expectancy scenario ending 2037.

Unresolved · residual reliance: medium

DATA-DERIVED INFERENCE · 15:18

$1.07M lost wages

Present value under Scenario 1, assuming a high-school diploma.

Unresolved · residual reliance: medium

Scenario projections get their own lanes. They never count as “false facts.”

Source: claims 18, 19, 23 from the row-9 report JSON (local run artifact). Values rounded. Not legal analysis.

One interview, nineteen claims.

Satya Nadella on Squawk Box about Stargate. Every claim keeps its timestamp and evidence trail.

TIME	CLAIM (AS EXTRACTED, SHORTENED)	LANE	STATUS
01:05	OpenAI APIs remain exclusive to Microsoft Azure going forward.	Fact	**Supported**
01:18	Microsoft and OpenAI maintain revenue-sharing arrangements.	Fact	**Supported**
03:49	Microsoft is investing $80 billion a year, largely for cloud and AI.	Fact	**Supported**
00:58	Microsoft will serve as a technology partner to the Stargate project.	Fact	**Unresolved**
00:43	Microsoft acted essentially as a seed investor for OpenAI.	Fact	**Unresolved**

In the ClearFactor companion, the matcher found no Item 1A factor for any of these 19 claims.

Source: row-7 report JSON (local run artifact). Status groups the engine's labels; research aid, not a verdict on the speaker.

Use the tagged GitHub source.

Pinned source install shown; configure Gemini / Vertex and required search credentials before a live run.

```
git clone --branch v3.0.0 --depth 1 \
  https://github.com/hotchilianalytics/verityngn-oss.git
cd verityngn-oss
pip install -e ".[deep,vision,audio]"
```

```
verityngn analyze --file cleared_clip.mp4 --tier full --modality video --deep
```

Source: tagged README and pyproject.toml. Network/model costs still apply; local file does not mean offline inference.

Local-first does not mean confidential by default.

Treat provider review, human verification, and evidence preservation as pilot requirements.

Clear the inputs

Use public or authorized material. Review privilege, protective orders, privacy, consent, and provider terms.

Map the data flows

Review what reaches model/search vendors, retention and training terms, access controls, and logs.

Verify the outputs

Counsel checks quotes, source authority, dates, context, contrary evidence, and every proposed action.

Preserve the record

Keep originals, approved source copies, version/ref, run settings, and reviewer sign-off in your process.

Guidance: ABA Formal Opinion 512 (2024); applicable jurisdictional rules control. No privilege or compliance guarantee.

Which workflow would you actually try?

Raise your hand for one—then bring a public or cleared example.

A

Deposition prep

Claims to inspect.
Questions to ask.

B

Public-claims review

Product demos.
Executive statements.

C

Disclosure pilot

Item 1A vs own record.
Separate Phase 1 companion.

Tell us: your role + a public example + the output you need. No confidential details in public issues.

Invitation to participate; not a claim of existing users or a commitment to a particular release roadmap.

GET INVOLVED

Open core. Human judgment. Better questions.

Bring a claim you need to review. Help us build the right workflow.

Try the release. Inspect the evidence.
Open an issue with a public example—or contribute code.

SCAN FOR RELEASE

github.com/hotchilianalytics/verityngn-oss

VerityNgn OSS 3.0.0 | Apache-2.0 | HotChili Analytics, LLC | Updated 27 October 2026

What this release does—and does not establish.

Keep these distinctions in sales conversations, demos, and follow-up material.

CORE ENGINE	YouTube / local video, typed claims, verification, Deep Research and reports.
OPTIONAL RESEARCH	Vision, audio, and predictions sensors; not deception or trading-alpha validation.
MCP / PLUGINS	Code is included; interface identifies as 3.1.0. Analysis tools return commands, not live jobs.
DISCLOSURE	Separate Phase 1 rfkit checkout. Empty disclosure dependency marker; not turnkey.
LEGAL WORKFLOW	Human review required; no certified e-discovery, legal-citation checking, or admissibility result.
HOSTED PLATFORM	Commercial map includes phased targets; do not assume every workspace / vault feature is live.

Sources: tagged README; open-core model; MCP.md; RFKIT_OSS_EXTRACT.md; COMMERCIAL_MAP.md.

Release provenance and remaining launch checks

Verified against the tagged tree and GitHub API on 27 October 2026.

PINNED GITHUB REF	v3.0.0 → 644e5b4b6005b80863490dcfbd77a25ca5edd133
PUBLICATION DATE	Tag / release updated 27 Oct; GitHub retains the original 29 Aug published_at.
PACKAGE DISTRIBUTION	PyPI verityngn/3.0.0 JSON endpoint returned 404; source install is shown.
COMPANION STATUS	rfkit extract docs retain a pre-publication gate. Confirm before promising availability.
PROOF LANGUAGE	Functional PASS only. No legal-accuracy, customer ROI, deception, or return guarantee.
SOURCE POLICY	Tagged URLs appear in speaker notes. Legacy v2 marketing metrics were not reused.

For presenter review—not intended as the public-facing close. Recheck mutable distribution metadata before posting.
