VERITYNGN OSS · V3.0.0

VerityNgn OSS 3.0.0 — Public Engine Release

HotChili Analytics / VerityNgn Research · 2026-08-29 · Apache-2.0 engine
Companion to GitHub release v3.0.0 · Live gallery: verityindex.com/gallery

> **Claim-risk platform, not a lie detector.** Deep Research, six claim kinds, genre-aware CRAAP/SIFT, and optional CEO sensors ship in Apache OSS. verityindex.com is the hosted control plane. ClearFactor is the first paid disclosure app. Predictions *sensors* are OSS extras — not allocation alpha.

1. Abstract

We release **VerityNgn OSS 3.0.0**, a standalone multimodal engine for claim extraction and verification from video. This release restores **Deep Research** (grounded forensic summarization) to the public tree, adds optional authenticity and spectral voice cues, and documents the open-core boundary. We do *not* claim earnings prediction, allocation factors, or lie detection.

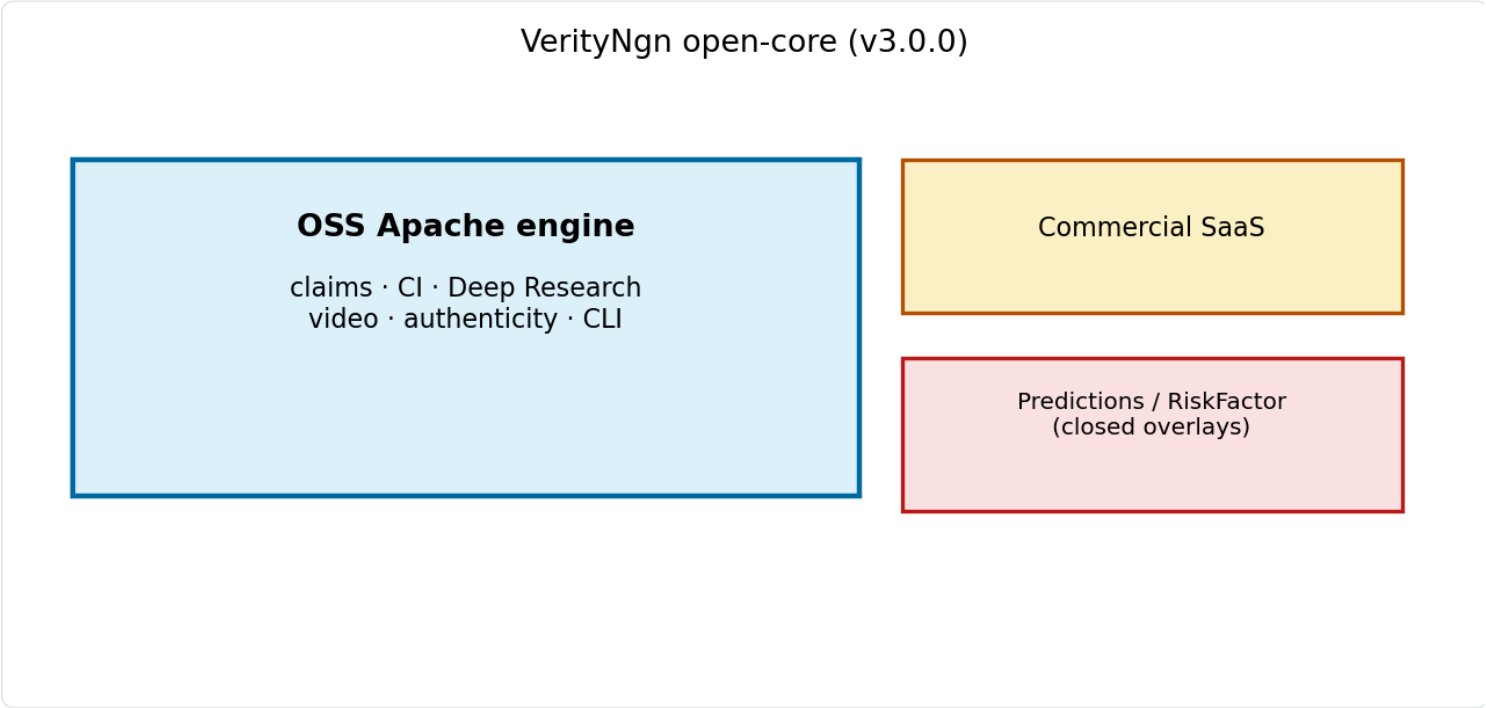

Figure 1. OSS Apache engine vs hosted control plane and paid apps.

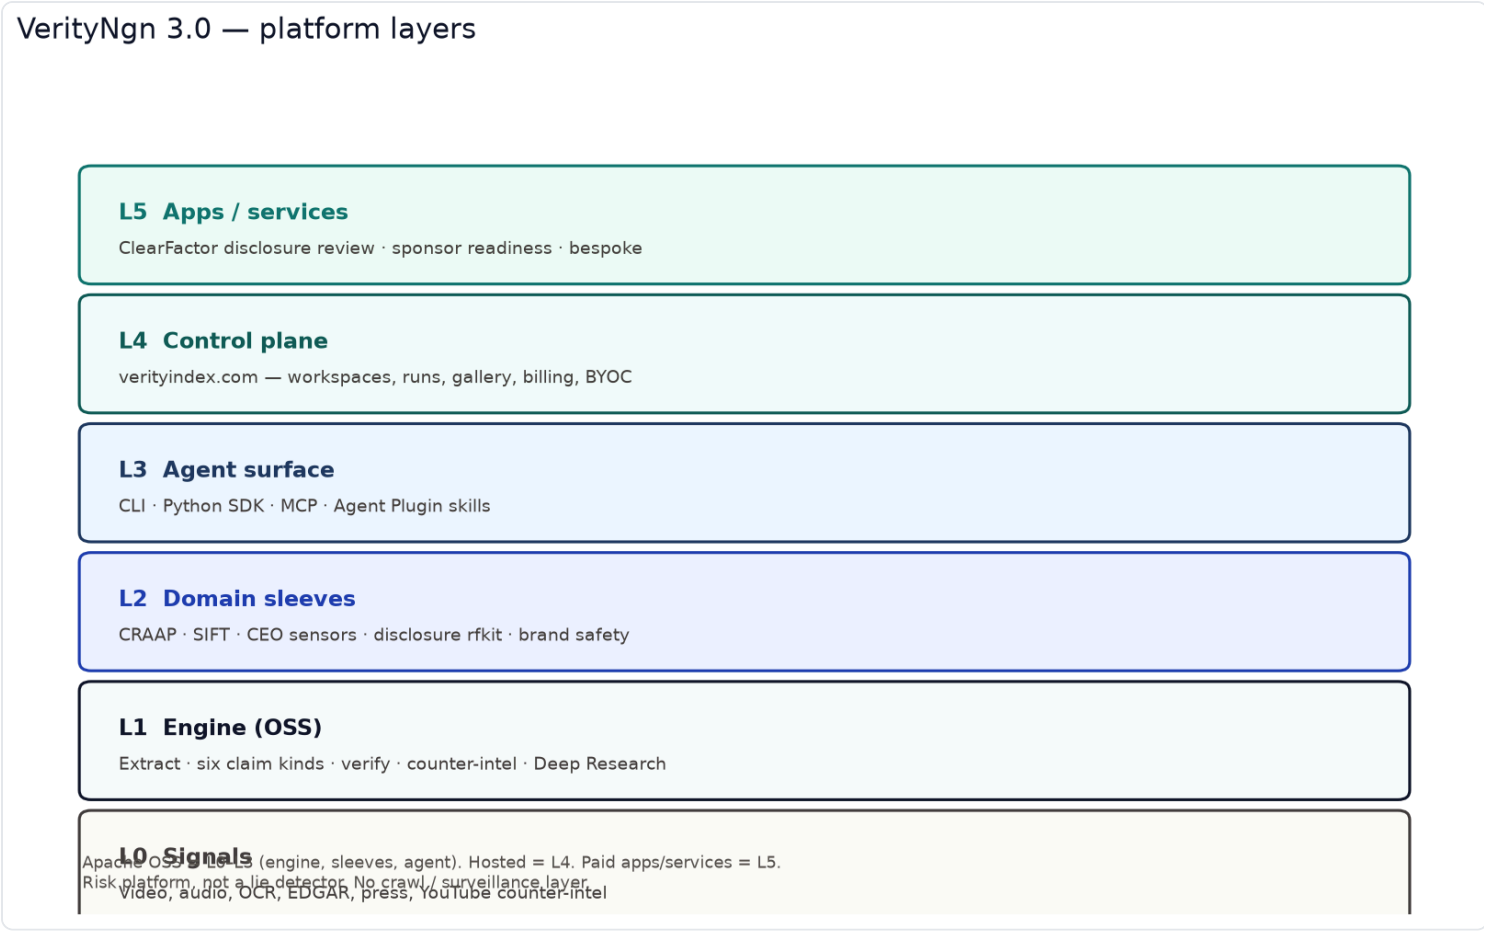

Figure 1b. L0 signals through L5 apps. Apache owns L0–L3.

2. System overview

```
Video URL or file
  → multimodal analysis + claim extraction
  → counter-intelligence (YouTube / press-release / Sherlock CI)
  → probabilistic verification (TRUE / FALSE / UNCERTAIN)
  → standard report (MD / HTML / JSON / PDF)
  → optional Deep Research (Gemini grounded pass + combined report)
  → optional authenticity / spectral / Face Landmarker cues
```

`verityngn analyze <url> --deep` runs after the standard report JSON exists.

3. Live gallery evidence (verityindex.com)

Scraped from the public gallery on **2026-08-29**: **12 reports**, **427 claims** analyzed, labels = {"Likely to be True": 6, "Mixed Truthfulness": 6}.

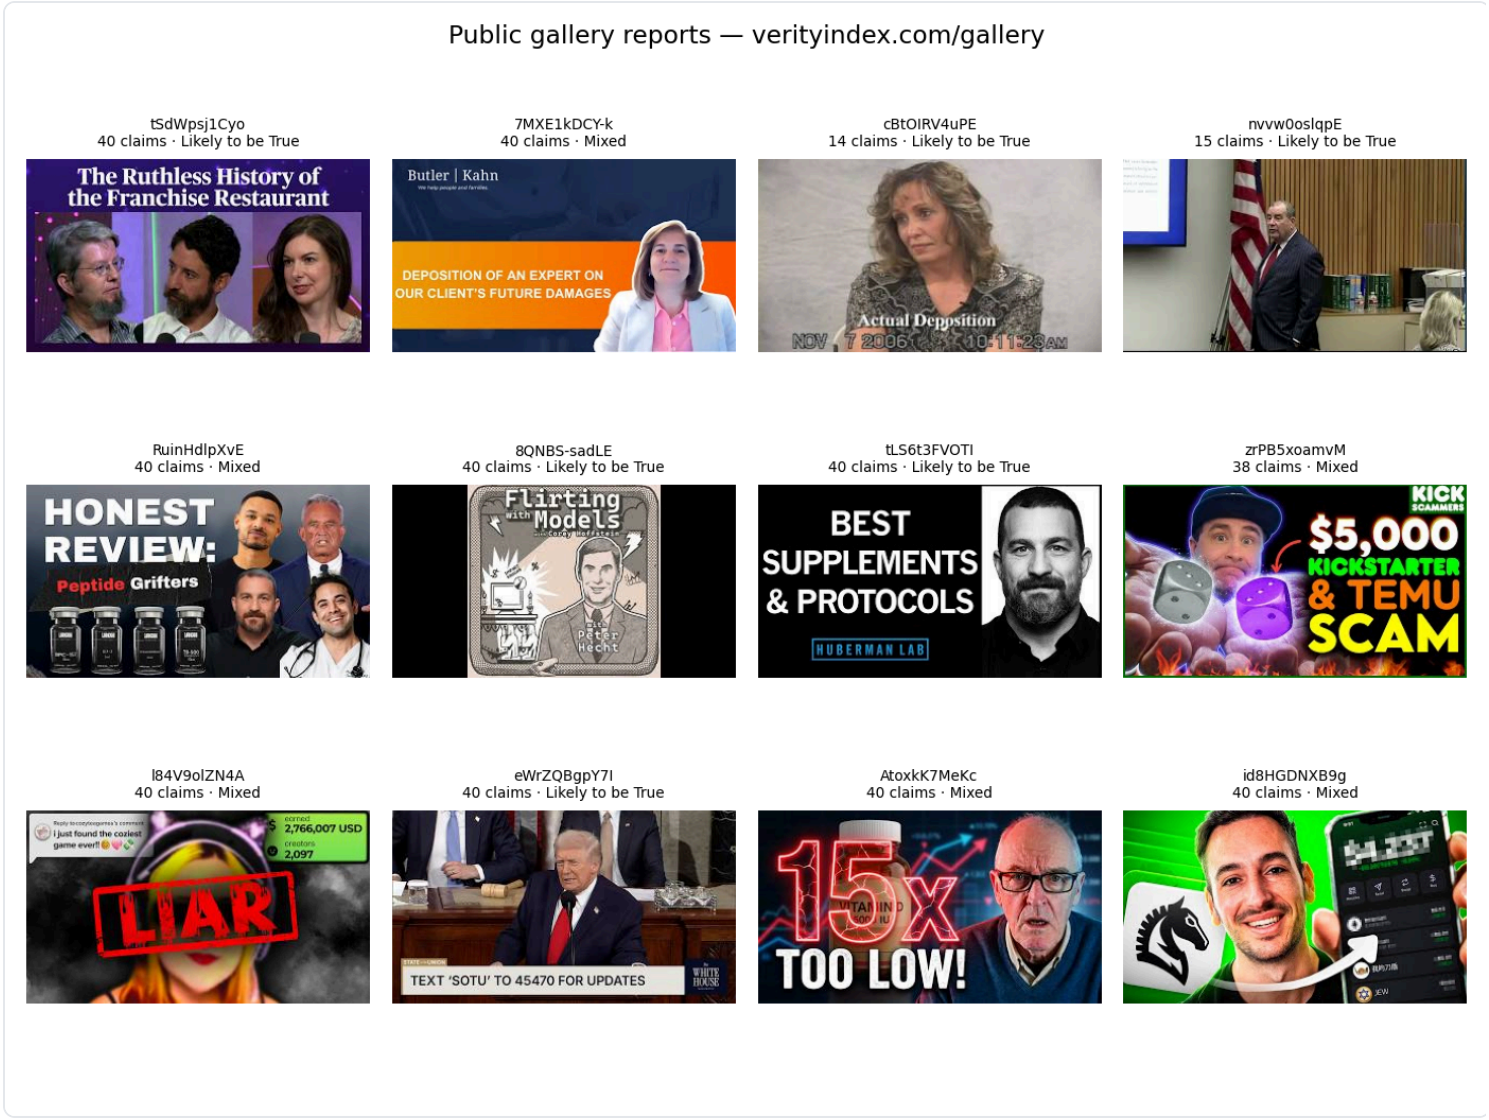

Figure 2. Public gallery cards (YouTube thumbnails + claim counts). Source: verityindex.com/gallery.

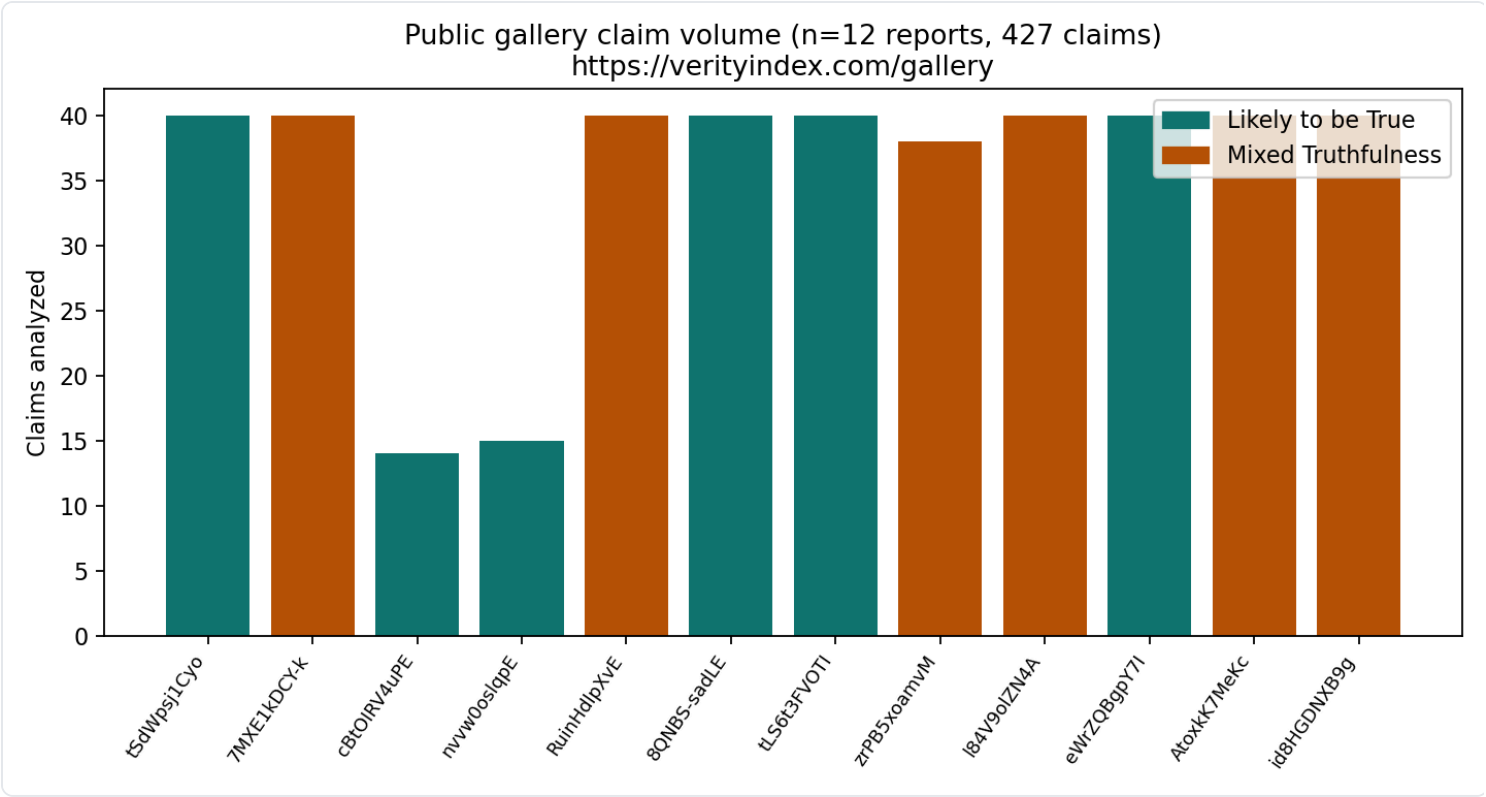

Figure 3. Claims analyzed per public gallery report (teal = Likely to be True, amber = Mixed).

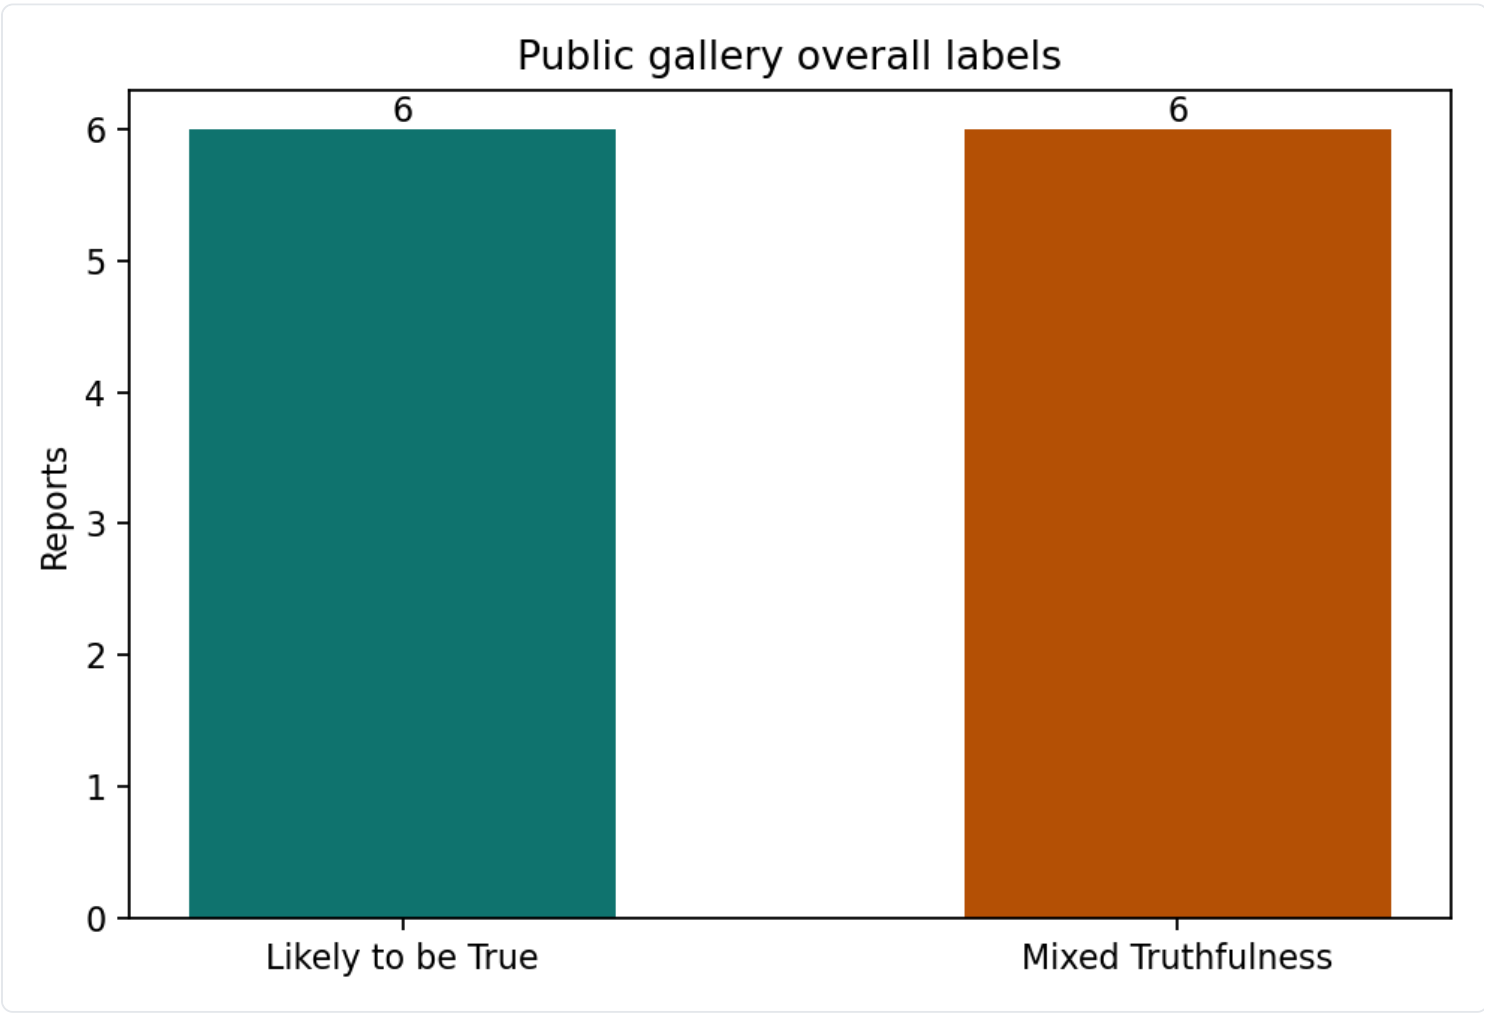

Figure 4. Overall gallery labels across the public set.

Video ID	Claims	Gallery label	Source
tSdWpsj1Cyo	40	Likely to be True	source
7MXE1kDCY-k	40	Mixed Truthfulness	source
cBtOIRV4uPE	14	Likely to be True	source
nvvw0oslqpE	15	Likely to be True	source
RuinHdlpXvE	40	Mixed Truthfulness	source
8QNBS-sadLE	40	Likely to be True	source
tLS6t3FVOTI	40	Likely to be True	source
zrPB5xoamvM	38	Mixed Truthfulness	source
l84V9olZN4A	40	Mixed Truthfulness	source
eWrZQBgpY7I	40	Likely to be True	source
AtoxkK7MeKc	40	Mixed Truthfulness	source
id8HGDNXB9g	40	Mixed Truthfulness	source

Editorial labels on the gallery are HotChili Analytics LLM assessments — not YouTube data.

4. In-repo gallery claim mix (OSS report JSONs)

Claim-level TRUE/FALSE/UNCERTAIN from `ui/gallery/approved/` (11 videos, 75 claims with verification results): {"TRUE": 29, "FALSE": 39, "UNCERTAIN": 7}.

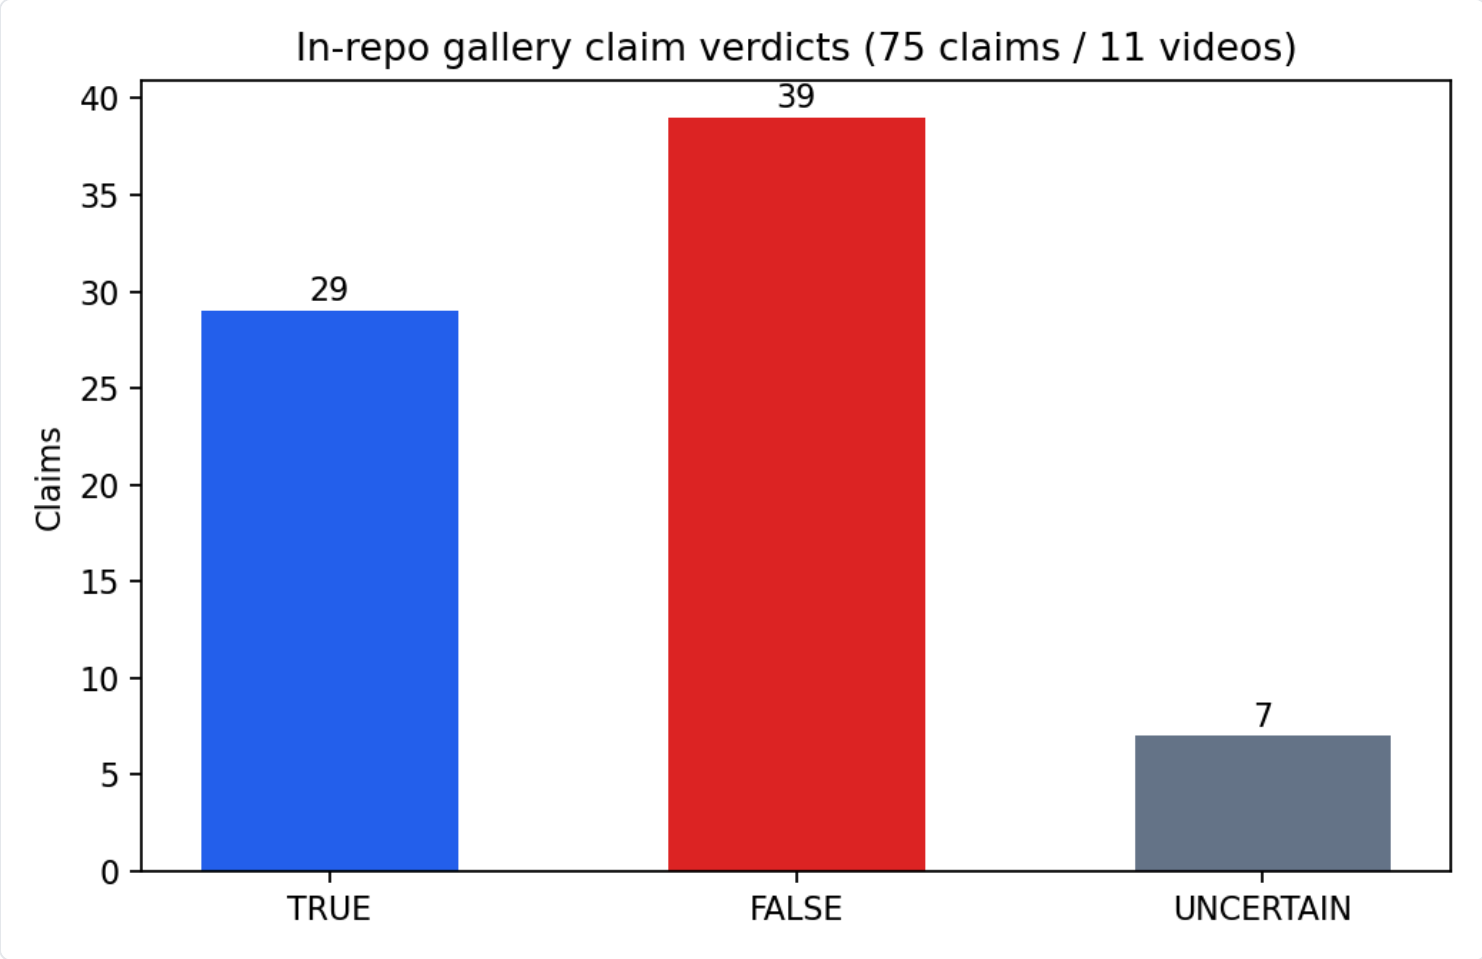

Figure 5. Claim-level verdict mix from in-repo approved gallery JSONs.

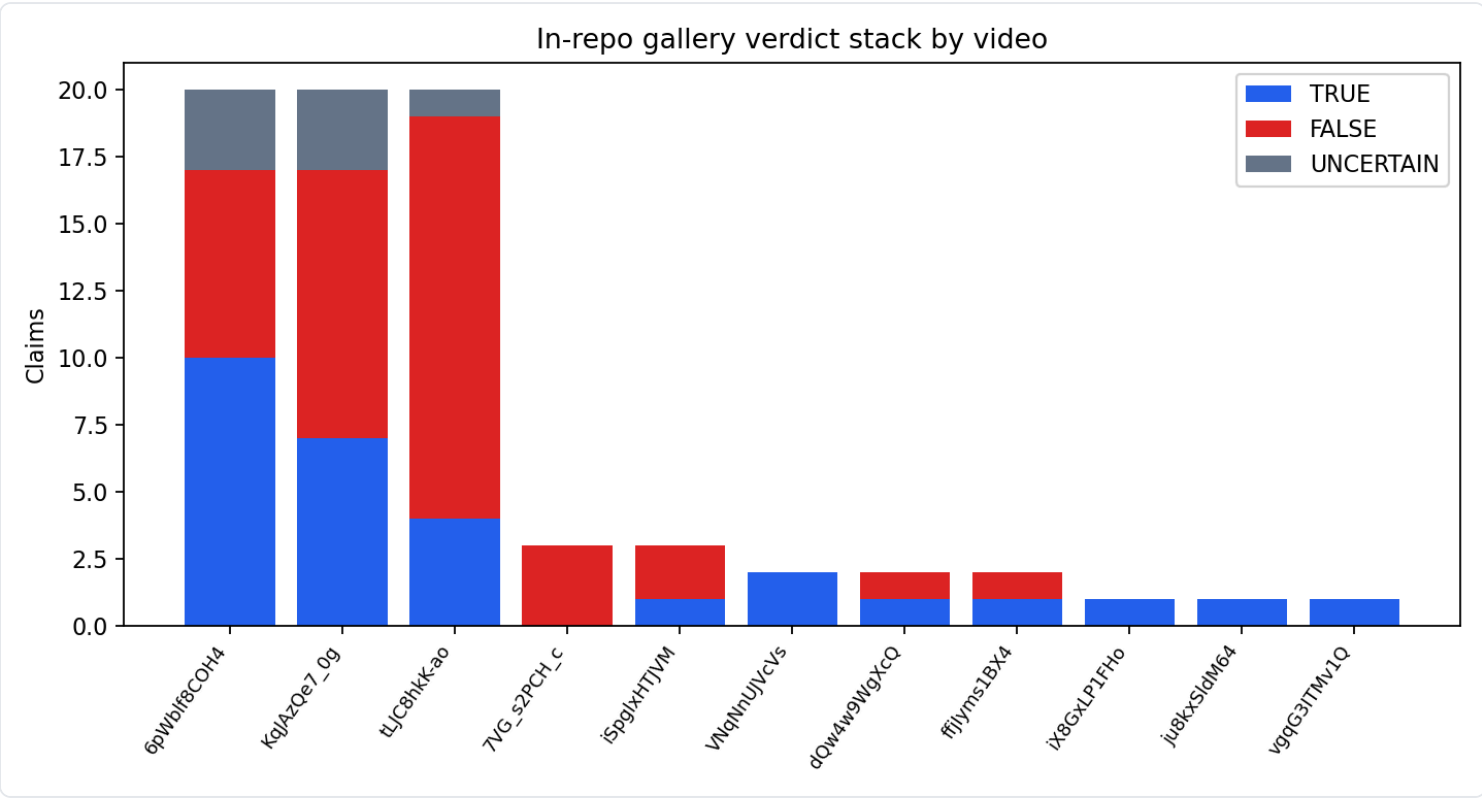

Figure 6. Per-video stacked verdicts (in-repo gallery).

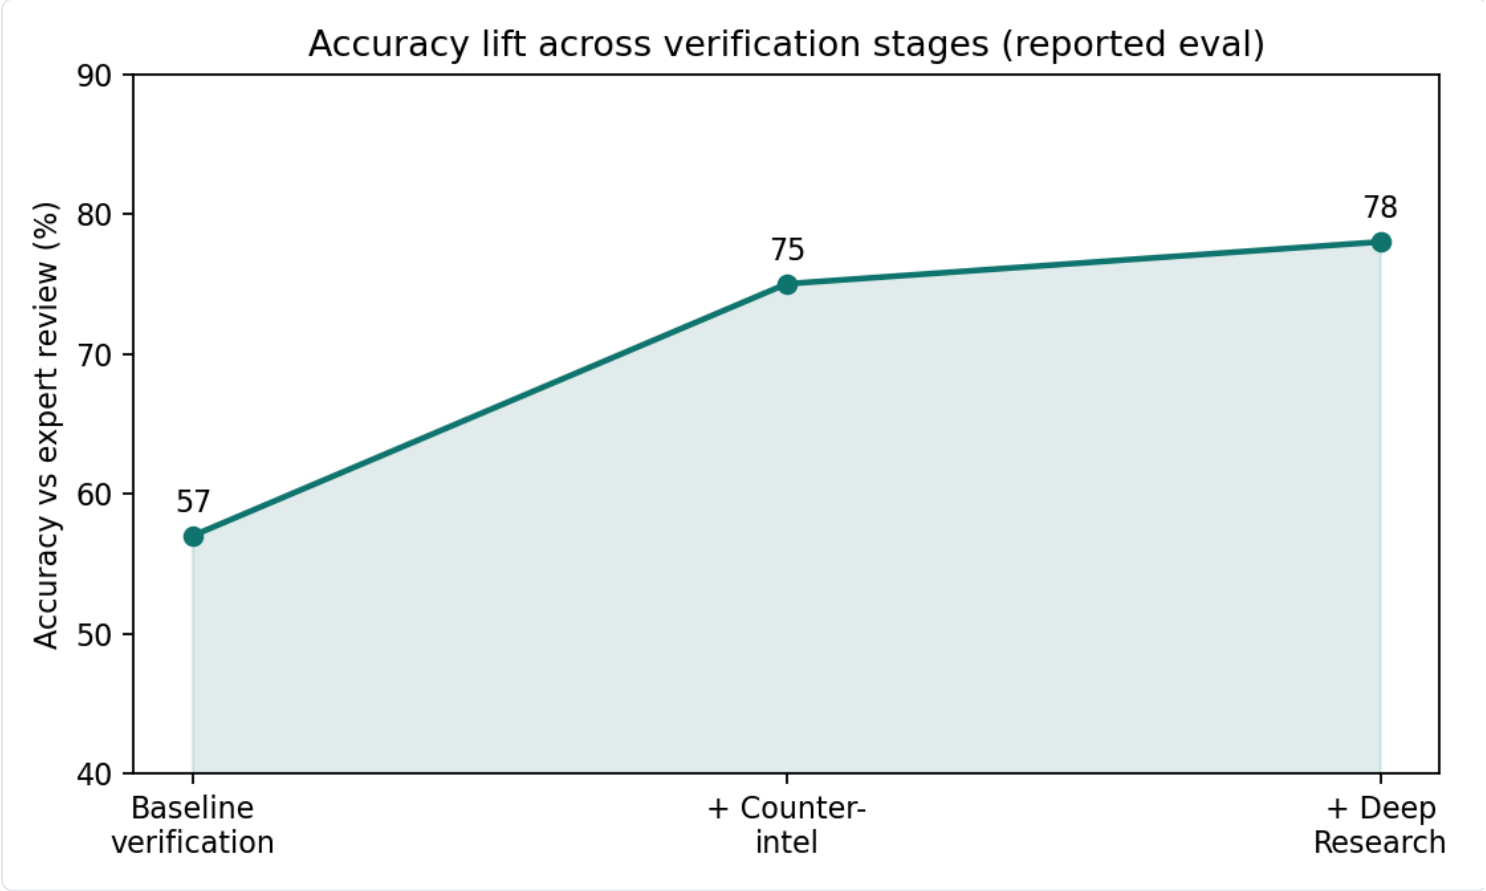

Figure 7. Prior evaluation narrative: accuracy lift across verification stages (baseline → counter-intel → Deep Research).

5. Install

```
pip install 'verityngn[deep]'
verityngn analyze 'https://www.youtube.com/watch?v=VIDEO_ID'
verityngn analyze 'https://www.youtube.com/watch?v=VIDEO_ID' --deep
verityngn analyze --file deposition.mp4 --title "Matter clip"
```

6. Open-core dependency model

Hosters pin **OSS ≥3.0.0**. Research sleeves (including CEO sensors) live in the public tree. Boundary CI fails on commercial markers (Stripe, credits paths), not on research package names. See `docs/OPEN_CORE.md` and `docs/platform/PLATFORM_OVERVIEW.md`.

> **What we will not claim:** earnings prediction / allocation alpha; “lie detector” branding; crawl or surveillance.
